

Baby Shield Overview

Your baby loves to press all the keys on your keyboard, but he/she doesn't realise the problems that can result:

- deleted or moved files
- deleted or moved emails
- windows closed
- etc

Baby Shield prevents your baby switching to any other applications. When a key is pressed, your baby is entertained with a image relating the key pressed and one of a number of tunes if one is not already playing.

So using Baby Shield:

- your Mac/PC is protected
- your baby is entertained
- your baby is educated
